L<sup>A</sup>T<sub>E</sub>X +  +  + Latexmk

# L<sup>A</sup>T<sub>E</sub>X Resources

- T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X Books ([latex-project.org](http://latex-project.org))
- LaTeX: A document preparation system, User's guide and reference manual
- L<sup>A</sup>T<sub>E</sub>X - Wikibooks, open books for an open world
- Documentation - Overleaf, Online L<sup>A</sup>T<sub>E</sub>X Editor

# Inkscape Resources

- <https://inkscape.org/>
- Inkscape Tutorials<sup>1</sup>
- My Inkscape Extensions

# Beamer Resources

- Beamer User Guide
- Beamer - Overleaf, Online L<sup>A</sup>T<sub>E</sub>X Editor

---

<sup>1</sup>Also accessible from within Inkscape. Help → Tutorials

# Latexmk Resources

- Using Latexmk
- Latexmk Manual<sup>2</sup>

---

<sup>2</sup>Also available from `man latexmk`.

# Templates

- [latex-templates](#)
- [inkscape-templates](#)

# Branding Guidelines

- [ORNL Branding Guidelines](#)

# New Shared Presentation

1. Create a new blank Overleaf Document.
2. Clone Overleaf project's git repo. Menu → Git → Copy Command

```
git clone https://git.overleaf.com/<url> <Project Name>
```
3. Replace content of repo with the desired **L<sup>A</sup>T<sub>E</sub>X** Template Files.
4. (Optional) Copy `main.tex` to `template.tex` to use as a reference and for slide layouts.
5. Commit your changes.
6. Edit `main.tex` to create your slides.

# Notes

- Markdown is quite limited in beamer, so converting to  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$  with **pandoc** might work better.

```
: '<,>'!pandoc -f gfm -t beamer
```
